STRONG POINTS

- The application allows the recalculation of assets at any previous or future date
- Allows the management of total and partial sales operations
- The period of depreciation is automatically calculated according to the classification code
- The application offers the possibility of managing inventory objects
- The program helps you to plan fixed asset costs, by cost centres and periods
- You obtain comparative studies for the depreciations reported at the depreciated value, or the budgets planned against the budgets registered
- Allows you to choose the type of depreciation: linear, accelerated, regressive or without depreciation
- Allows you to group and analyse assets by categories, locations, budget codes or storage
- Offers the possibility of making re-evaluations due to inflation
- Allows you to work with an unlimited number of users
- Communicates in real time with the CIEL Accounting application
- New versions of the product can be downloaded from the internet

FEATURES

1. General data

- The application is delivered with an "Example" company, in which you can perform tests and useful exercises as while you learn to use the application
- The installation of the program needs a minimum of involvement from the user
- You can manage users by using passwords and rights of access to companies and to options in the program

2. Basic files

Assets

You can:

- Create an unlimited number of sheets irrespective of the type of depreciation (linear, regressive, accelerated or without depreciation)
- Remove the assets from the sales, cancellation or transfer records
- Frame each asset in a category
- Changes, removes or duplicates the fixed sheet assets
- Classifies the assets according to their location
- The application offers the list of catalogue codes according to the law

www.ciel.ro

Inventory objects

- You can issue inventory sheets, in which to insert all the necessary information: location, referent, storage, VAT account, date of purchase, date of commissioning, date of exit, origin, name of the provider, name of account, purchase value, etc.
- With CIEL Fixed Assets Professional, you can easily manage the commissioning of stock objects
- You can obtain the record of stock objects per location
- The application enables you to associate references for the stock objects, as well as to view the history of the references for each of them
- You may generate accounting notes for the stock objects. The accounting notes will be automatically transferred in CIEL Accountancy
- The application will help you plan the costs with fixed assets, by establishing the budgets per cost  and period
- You may view the history for fixed assets and stock objects:
 - Account changes
 - Location changes
 - Budget code changes

3. Listings

- All listings are available on the screen or at the printer
- You can list:
 - Monthly costs centralized per account, location, classification code, budget or detailed costs per asset code
 - Statement of depreciation sums, purchase sums, residual costs per financial year or depreciation, grouped per account, categories or location
 - Asset balance
 - Customized reports, using the Report Generator
 - Fixed asset sheet, asset labels, account assets, etc.
- Obtaining comparative reports: you may create and list comparative reports on depreciations reported to the depreciated value or for planned budgets reported to the achieved value (in text or graphical format). Reports are available in estimates

HARDWARE SPECIFICATIONS
